Salzkotten-Upsprunge,

19.03.2015

Dear Mr. Bonder,

In the second phase of a large construction project, the business premise of our headquarters was expanded to over 4,000 m² to include dispatch and logistics area. Once it became operational, it was handed over for our 75th corporate anniversary in 2014.

Our customers expect us to deliver products of the best possible quality with baked goods having fresh, optimal and unadulterated tastes. So hygiene is the basic requirement, and it also applies to walls and ceiling. This includes highly effective prevention against penetrating humidity and mould. To fulfill this requirement, we were recommended to the multi-functional coating system Thermalife® based on DHMb® technology, which satisfies all necessary prerequisites.

As far as we're concerned, using this system is correct and lastingly important. We will keep using it in the future.

Yours sincerely,

Harald Laufs
Managing Director

Dear Sir or Madam,

The city of Salzkotten commissioned the construction of a well functioning dining hall of nearly 900m² for more than 400 pupils over a building period of approx. 16 months for the school center, especially the comprehensive school. Construction planning, land use planning and implementation lie entirely in the hands of our professional and competent municipal employees.

To achieve an improved room climate, we were recommended to use the multifunctional coating system Thermalife® based on DHMb® technology. Now one year on, we can say that our decision was correct.

The dining hall constantly demonstrates an optimal, comfortable room climate that keeps the pupils motivated.

With best regards,

Ludwig Bewermeier

THERMALIFE HANDELSGESELLSCHAFT MBH
Am Garock 3
33154 Salzkotten

Paderborn, 19.03.2015

Dear,

Since 2013, we have been successfully using your Thermalife® Interior silicon resin paint mainly due to its ideal equalization of temperature and humidity on the surface of building parts when applied on interior wall surfaces.

At first we tried your coating reinforced with Double Hybrid Membrane (DHMB) Technology primarily on ceilings and walls as well as their thermal bridges exposed to condensation. Then we successfully applied your multifunctional coating system to heater niches, bath covers, cellars and exterior walls with thermal bridges and their outside corners and ceiling areas over attic that are not insulated.

The results of using your coating system were: a balanced, comfortable room climate, a better distribution of humidity, improved sound absorption, less dust formation and more even distribution of heat as a result of heat reflection from the coated walls.

We will keep using your multifunctional coating system Thermalife® Interior and recommending it to our clients.

Sincerely yours,

Dietmar Ahle, General Manager

12 September 2016

Dear,

During our office relocation and the subsequent renovation in summer 2015, we chose your Energy Saving Paint to paint our interior and exterior areas.

We based our decision on the information you gave on energy efficiency, room climate and anti-allergic effects.

Now one year has passed, and I'd like to share with you our experience with your product in the naturopathic clinic and school for holistic health practitioners.

Let me begin by thanking you once again for introducing us your product with great enthusiasm and conviction. The decision to use your Energy Saving Paint for our new office space has definitely paid off.

The external façade 'shines' in bright white; energy use for heating in autumn and winter has significantly decreased, and the room climate in the office and training rooms is excellent.

Although we're running a building with flat roof, we were asked by trainees and patients on hot summer days whether the air-conditioner was turned on.

All in all, the purchase has been well worth it. Especially for a medical facility this makes perfect sense because it enables us to work in a constantly patient-friendly and hygienic environment.

We also thank you once again for the voluntary production and delivery of the requested paint colours and wish your company continued success.

We look forward to working further with you and remain,

Sincerely yours,

Dirk Mutschke
Naturopathic Practitioner

Thermalife (Liquid Coating) = Energy Saving Product

Comparison of Heating Oil Consumption

Please find here below a comparison of the heating oil consumption for 4 consecutive years and specifically from 2010 until 2014. The first two winter periods were when the houses had no protection while the next two years the Mig-Esp was placed (in house A' the application was made on the exterior and interior walls and in house B' only on the exterior walls).

The two houses are identical in size and in interiors, they have the same external aspects, the same initial materials (construction year 1988) and the same materials were used in 2012 for repairs (please see Table below with relevant details):

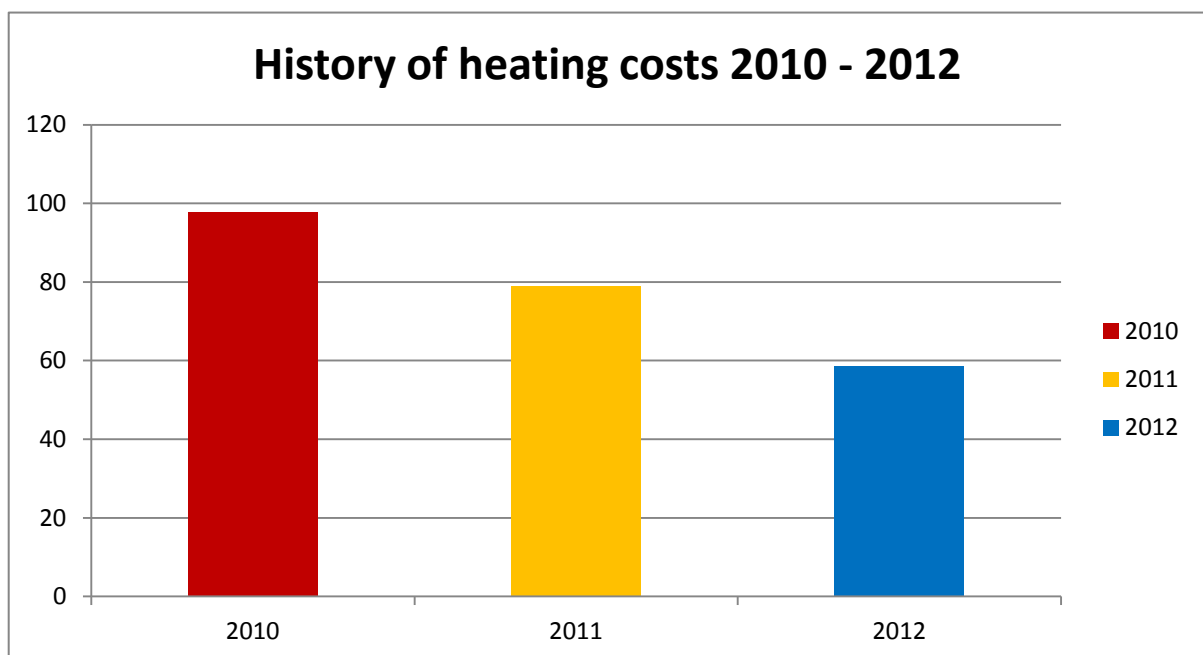

T A B L E of Heating Oil Consumption			
Ref. No.	Winter Period	HOUSE A'	HOUSE B'
1	2010/2011	2450 ltrs	2500 ltrs
2	2011/2012	2400 ltrs	2500 ltrs
APPLICATION OF Thermalife			
3	2012/2013	1400 ltrs	1780 ltrs
4	2013/2014	1500 ltrs	1830 ltrs
Average Saving	Liters/Year Percentage %	975 ltrs 59,8 %	695 ltrs 27,8 %
Interior Surface		250 m ²	250 m ²
Application of Thermalife			
Interior		Yes	No
Exterior		Yes	Yes
Floors		3 floors	3 floors
Exterior Walls (Construction Typology)		Cavity wall: brick 10, void 10, brick 10 cm Normal plaster 25-35 mm.	
One common wall		Semi touch houses	
Owner		Katia Spiritou	Georgia Zervou
Both houses are situated in Nicosia (Cyprus)			

History of heating costs 2010 - 2012
D-33154 Salzkotten, Westring 4 - 105 m²

Year	VE
2010	97,8
2011	79
2012	58,5

Decrease of heating costs total: 40,2%

2010 - without Thermalife

2011 - 1x Thermalife coated

2012 - 2x Thermalife coated
